CDC Jimini CL[®] Small Green Lentil

Progress Through Research
Le progrès grâce à la recherche

Description:

CDC Jimini CL[®] is a high yielding, small green lentil with tolerance to Clearfield[®] herbicides. CDC Jimini CL[®] should be a good fit in all lentil growing regions of western Canada especially the Brown soil zones.

Strengths:

- High yield potential compared to CDC Invincible and CDC Kermit
- Clearfield[®] tolerance
- Larger seed compared to CDC Invincible and CDC Kermit
- Taller than CDC Invincible

Neutral Traits:

- Similar disease resistance characteristics compared to CDC Invincible and CDC Kermit

1. CL indicates Clearfield tolerant variety
2. Co-op and Regional Trials in SK since 2006. Comparisons to the check variety, small red lentil CDC Maxim.
3. Maturity ratings: normal maturity range in days based on May 1 seeding E=100, VL=110 but maturity can be much earlier in dry years, much later in cool wet years.

Stewardship Guidelines for Clearfield Lentils. BASF is committed to the long-term sustainability of the Clearfield[®] Production System for lentils. The stewardship initiatives co-developed by BASF and university researchers are designed as guidelines for Clearfield lentil producers in an effort to maximize the value realized by producers as well as preserve this herbicide-tolerance technology for years to come. These management practices were designed to prevent and/or delay herbicide resistance development in weed populations in Canada.

Full details of the guidelines can be found at: https://agriculture.basf.ca/content/dam/cxm/agriculture/canada/english/agriculture/west/seeds-and-systems/documents/Clearfield_Lentil_Stewardship_Guidelines.pdf
